Input and declared preprocessing

Finite samples x features; source metadata

v2 H1 inference API

Full-feature correlation dissimilarity
Ripser + Gaussian maximum reference

General comparison CLI

Shared PCA representation
Condition geometry and summaries

Reduced-cloud recalibration

Refit reference after sample removal
Stable count or unresolved result

Design-axis diagnostics

Circular time; categorical treatment
Association and fitted phase dispersion

Auditable records and reports

Settings | source hashes | selected features | numerical outputs

Detected H1 features do not enumerate biological oscillators.
